## REGULAR EXPRESSION OPERATIONS

Class: System.Text.RegularExpressions.Regex

### Pattern matching with Regex objects

To initialize with	Use constructor
Regular exp	Regex(String)
+ options	Regex(String, RegexOptions)
+ time-out	Regex(String, RegexOptions, TimeSpan)

### Pattern matching with static methods

Use an overload of a method below to supply the regular expression and the text you want to search.

### Finding and replacing matched patterns

To	Use method
Validate match	Regex.IsMatch
Retrieve single match	Regex.Match (first) Match.NextMatch (next)
Retrieve all matches	Regex.Matches
Replace match	Regex.Replace
Divide text	Regex.Split
Handle char escapes	Regex.Escape Regex.Unescape

### Getting info about regular expression patterns

To get	Use Regex API
